IPO (Input–Process–Output)

IPO BECOMES A LOOP

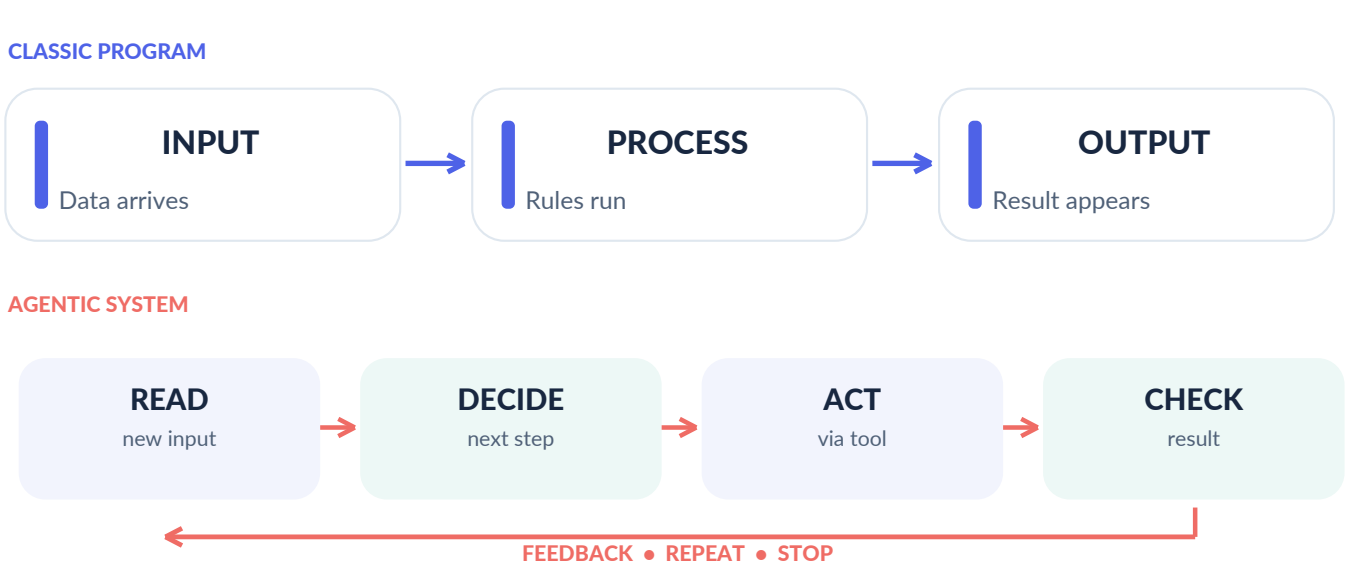

The classic Input → Process → Output model still matters.

SCAN & LEARN

ONE IDEA

Each agent step uses IPO; the overall system uses output as new input, repeatedly.

VISUAL MODEL

NOTICE

Still IPO

The basic model is not obsolete.

UNDERSTAND

New: feedback

An observed result changes the next decision.

REMEMBER

New: control

Limits and approvals are part of the loop.

THE MENTAL HOOK

IPO describes one step; the agent loop connects many steps.

THINK WITHOUT A LAPTOP

The agent searches, sees no result, and searches again. What changed?

ANSWER: The output of one step became new input.
