AI (Artificial Intelligence) • PDF (Portable Document Format)

MEMORY IS NOT STORAGE

Where information lives determines what the agent can use now.

SCAN & LEARN

ONE IDEA

Stored somewhere does not mean currently in the model's context; retrieval connects the two.

VISUAL MODEL

	FROM SHORT-LIVED STATE	FROM SAVED SOURCE
CURRENT VIEW	**Working context** Conversation and tool results used now.	**Loaded fact** Saved knowledge copied into today's context.
NOT IN VIEW	**Session cache** Useful state kept briefly outside the prompt.	**Database / log** Records available for later retrieval.

Saved facts are copied into current context; the copy may expire.

NOTICE

Context

Information currently supplied to the model.

UNDERSTAND

Storage

Files and databases can persist between sessions.

REMEMBER

Retrieval

Find relevant stored facts and load them when needed.

THE MENTAL HOOK

Saved ≠ seen. To use a fact, first retrieve it.

THINK WITHOUT A LAPTOP

A PDF is on a drive, but the AI was not given it. Does it know it?

ANSWER: Not automatically; access and retrieval are needed.
