INSIDE A DATA CENTER

A building that coordinates power, computers, storage, networking and people.

SCAN / LEARN

THE SYSTEM AT A GLANCE

01 POWER › 02 COMPUTERS › 03 NETWORK › 04 SERVICE

FOUR IDEAS THAT MATTER

1 RACKS ARE SHELVES

A rack holds multiple servers and network switches. A server is a computer that serves other computers.

2 ALWAYS-ON SUPPORT

Electric power, cooling, fire controls and physical security help the machines operate reliably.

3 SOFTWARE COORDINATES

Programs distribute requests and move work between servers. A user normally sees only the application.

4 NOT A MAGIC CLOUD

The cloud is someone else's real hardware, offered as a service over a network.

MEMORY HOOK

Like a school: rooms, electricity, corridors and schedules support the actual lessons.

DISCUSS WITHOUT COMPUTERS

Which parts still matter if nobody is visiting the website right now?
